

## LIQUID POLY - CUSTOMER TESTIMONIALS

### **Using Liquid Poly saves a lot of prep time and we don't have the clean-up headache**

"We started using your product called Liquid Poly to protect surrounding work areas from concrete splatter.

The key to the product is that when you spray, make sure to properly coat the surface according to the instructions, when you do, the products is a dream to work with.

Surfaces that the product works great for us so far have been: steel buildings, acrylic stucco, parging, existing concrete we are pouring up to, pre-coating our power trowels and tools. It makes clean up a lot easier and our equipment stays nicer for longer.

One area that requires a little extra washing is on Vinyl Siding, but otherwise it is a great product. Using Liquid Poly saves a lot of time in our preparation and afterwards we don't have the headache of cleaning up concrete splatter. Just remember, don't skimp on the product and you will love it.

We spray everything now with Liquid Poly."

### **Liquid Poly works perfectly on glass, windows, and aluminum glazing**

We have been using Liquid Poly on glass, windows and aluminum glazing, to protect from concrete splatter, and it works perfectly, it saves us a lot of time and headaches. We cannot wait to try it out on our ride on trowels.

**We use it all the time for faux stone, brick siding, garage doors, steel siding and much more**

"Liquid Poly has saved my butt on many occasions. We use it all the time to protect areas such as faux stone, brick siding, garage doors, steel siding and existing concrete where we are pouring concrete. If you apply the product according to the instructions, you will love it. The more you apply, the easier it is to remove afterward.

For tools it works great, especially when working with coloured concrete which normally stains everything, but when you use liquid poly, the product keeps everything clean."

**Poly is very inconvenient, Liquid Poly works great**

"We always use Liquid Poly to protect surrounding areas from concrete splatter.

We used to use sheets of plastic poly on places where the power trowel coloured concrete is being poured up to grey concrete, but poly is very inconvenient . Liquid Poly works great for this - there is nothing to get in the way, and nothing to blow away when you use Liquid Poly."
