Helping People Understand So

nd Soils

What is a Published Soil Survey?

A soil survey is a detailed report on the soils of an area.

The soil survey has maps with soil boundaries and photos, descriptions, and tables of soil properties and features.

Soil surveys are used by farmers, real estate agents, land use planners, engineers and others who desire information about the soil resource.

Helping People Understand Soil

Major Parts of a Soil Survey Publication

- Table of Contents
- Detailed soil map units
- Use and management and interpretive tables
- Classification of soils
- References
- Glossary
- Index to map sheets
- Soil maps

Using the Soil Survey

- Obtain a printed soil survey from the NRCS, USDA office, or local conservation office or access a Web version at: http://soils.usda.gov/survey/
- Open the soil survey to Index To Map Sheets
- Locate your area of interest or property on the Index.
- The numbers in rectangles correspond to the map sheet number located in the second half of the publication.
- Look at the aerial map closely and locate landmarks such as roads or streams to find your area of interest.

Helping People Understand Soils

Using the Soil Survey (cont.)

- The lines on the image separate different soil types.
 Your area of interest may include one or more types.
- The small letters or numbers that are within the same polygon as your area of interest, such as ScC, or KnC, or LaC designate a map unit. Note this map unit symbol. It is the key to finding information.
- Turn to the Index to Map Units which shows the page where these map units are described. Also go to the various tables or reports which are organized by map unit symbol.

Helping People Understand Sc

Using the Soil Survey (cont.)

- This process is simplified in Web soil surveys but follow the same sequence:
 - 1. Locate your area of interest of the maps.
 - 2. Note the map unit symbol.
 - 3. Go to the text or tables for information on that map unit.

and Soils

Using the Soil Survey (cont.)

Glossary

Aeration, soil. The exchange of air in soil with air from the atmosphere . . .

If you find a term or soil description in the detailed information sheet on your soil and you would like to learn what that term means, go the *Glossary* section of the report. The *Glossary* is located in the center of the publication.

Helping People Understand

Using the Soil Survey--Tables

TABLE 1.--TEMPERATURE AND PRECIPITATION

TABLE 2.--FREEZE DATES IN SPRING AND FALL

TABLE 3.--GROWING SEASON

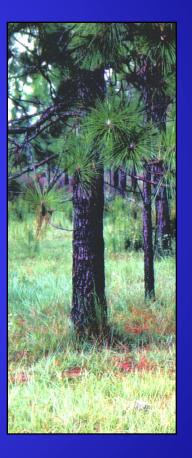

TABLE 4.--ACREAGE AND PROPORTIONAL EXTENT OF THE SOILS The Tables section of the soil survey report provides detailed information on soil properties and their suitability and limitations as well as management and production potential of the various soils.

Helping People<u>Understand So</u>

Using the Tables (cont.)

- The Tables section has detailed information on engineering index properties, physical and chemical properties, and soil and water features.
- The *Tables* section also has detailed information on soil use, such as crops and pasture, recreation, and engineering.
- To use the tables, simply remember your map unit symbol and find it in the appropriate table.

Helping People Understand So

Other Useful Information

The soil survey report may have other useful information such as the general soils map, prime farmland, use and management of soils, processes and factors of soil formation, and landforms and surface geology.
