

Ground Hawk®

HANDMADE RELIC METAL DETECTORS USA

Ground Hawk's enhanced circuitry will enable you to find deeper targets smoothly. Most coin detectors and other metal detectors on the market have a microprocessed audio system, so that the audio is pulsed. However, Ground Hawk has smooth

audio, with a separate threshold control. This feature will allow you to scan wider and to analyze targets more effectively. This also allows you to speed hunt in the search of a new relic site.

The depth of the Ground Hawk depends on the target, mineral content, and the water content in the soil. The wetter the soil is, the greater the depth. The Ground Hawk has a built in speaker, it also has a headphone jack. The detector contains 8 AA batteries, which is included in your purchase.

Customized for the Demanding Relic Hunter!

Comes With A 5 Year Warranty!

Ground Hawk was established in 1982. We have been handcrafting each detector one by one to its maximum performance. At Ground Hawk we are to please, and you are also when it comes to performance. Ground Hawk is different from the rest, why? The reason is that most detectors on the market are designed for coin hunting, yet they are used for relic hunting. Most people don't know that all detectors are not suited for relic hunting. Coin detectors sample from their maximum discrimination even in low range and rejects to soil mineral content harshly, and thus rejecting deeper brass buttons, firing caps. Ground Hawk's enhanced circuitry will enable you to find deeper buttons, firing caps and relics. The Ground Hawk has the ability to smoothly detect deep targets. Most machines on the market have a micro processed sound system, so that the audio is pulsed. Ground Hawk has smooth audio, with a separate threshold control. This feature will allow you to scan wider and to analyze targets better. This also allows you to speed hunt in the search of a new relic site. The Ground Hawk has an easy to read tuning meter. Tuning to the ground mineral content will allow all the good deep targets to be heard. And the sensitivity control will enable you to adjust for various interference such as an AC power line or static.

Suggested Retail Price..... \$884.00
