

TAMU-COMMERCE TRUMPET STUDIO REQUIRED MATERIALS & SUPPLIES

ALL trumpet students are required to have the following:

- Arban Method (Carl Fischer - I prefer the new Millennium Edition for its comb binding; the previous edition [red cover] is fine but you'll need to get it spiral-bound at a copy center)
- Irons "27 Groups of Exercises" (Southern) or another flexibility book (Walter Smith, Bai Lin, etc.)
- Clarke "Technical Studies" (Carl Fischer)
- Stamp "Warm-Ups and Studies" (Editions BIM)
- Concone "Lyrical Studies" (Brass Press/ed. Sawyer; Lorenz/ed. Shoemaker; or Balquhuidder/ed. Korak)
- A "pocket-sized" comprehensive music terms dictionary (Fischer, Schirmer, Alfred, Hal Leonard, etc.)

- Seiko STH-100 metronome/tuner
- Ear buds to use with metronome & tuner (1/8" plug, iPod ear buds or similar work great)
- METAL straight mute (Jo-Ral, Denis Wick, Yamaha, Bach "Stradivarius," or Tom Crown recommended)
- Cup mute (Denis Wick or Humes & Berg "Stonelined" recommended)

**WRITE YOUR NAME ON EVERYTHING!
WE'RE ALL USING MANY OF THE SAME BOOKS AND ACCESSORIES!!!**

You will also need a full compliment of cleaning and maintenance supplies. You can find most of these items in a pre-packaged cleaning kit and the rest at your local supermarket.

- mouthpiece brush
- valve casing brush
- cleaning rod and small absorbent cloth
- cleaning snake
- chemically-treated polishing cloth
- valve oil
- slide grease (petroleum jelly or pre-packaged slide grease)
- a small brush for hard-to-reach exterior crevices (an old toothbrush works well)
- small, *non-metallic* scouring pad
- grease-cutting liquid dish soap that does NOT contain bleach (Joy, Dawn, etc.)
- baking soda
- needle-nose pliers
- polish:
 - Silver-plate: a liquid/cream polish that is safe for *silver-plated surfaces*, such as Twinkle or Hagerty's
 - Lacquer: clean with a mild detergent, rinse thoroughly and buff with a polishing cloth treated for lacquered finishes

Be sure all slides move easily and all parts (slide stop nuts, water key springs/corks, valve caps, etc) are on the horn. The summer is a great time to have your horn professionally flushed and chemically cleaned, all worn or missing parts replaced, and all significant dents removed. Your repair shop can also replace missing mute corks at little cost.
