

PyroGuard™ FR Clothing

- Disposable garments that protect primary FR apparel
- Passes NFPA 701, 1989 and 1999 methods
- Generous sizing to prevent rip-outs
- Protect primary FR apparel from dirt, grease, and non-toxic liquids
- High MVTR for increased worker comfort

* PyroGuard™ FR garments are intended to be worn over primary flame resistant apparel and are flame retardant treated.

PyroGuard™ FR garments are made with a tough, breathable, light weight, and cloth like material. The material is wood pulp free for added durability. Wood pulp disintegrates when exposed to water or liquids. The material is typically treated with a phosphate-based flame retardant chemical. The addition of flame retardant chemistry causes the fabric to char at temperatures below the fabric's ignition point. This action deprives flames with a fuel source and provides a rigid structure for the component polymers to adhere to. The result is no flaming or molten drip.

INITIAL TECHNICAL DATA

Properties Testing	Test Method	Results	
Basic Weight	PFG Method	73.3 GSM	
Grab / Tensile	ASTM D5034-2001	MD	34 lbs.
		XD	26 lbs.
Vertical Flammability	NFPA 701 1989 Small Scale	Pass	
	NFPA 701 1999	Pass	

- Water Repellent
- Flame Retardant
- Wood Pulp Free

AVAILABLE GARMENTS

#9012

Standard
Coverall with
elastic wrist
and open
ankle
25 per case

#9015

Hood only
Coverall with
elastic wrist
and ankle
25 per case

#9019

Hood and Boot
coverall with
elastic wrist
25 per case
