This novel is the sequel to *Feed*. The world is still infested by zombies infected by the Kellis-Amberlee virus, which brings the dead back to life to infect or eat living humans. After Shaun Mason's sister, Georgia died due to the virus; he is in a state of depression and some insanity. Throughout the book, Shaun hears Georgia's voice in his head, which sometimes helps him think logically in bad situations.

Shaun's goal in life is to avenge Georgia and kill whoever caused her to die. He uncovers conspiracies of the CDC, which is a government-run organization that is supposed to be looking for the cure of the disease. However, they do not seem to be doing anything; in fact, Shaun finds out that they are spreading the disease in order to have control over the people. A rogue doctor from the CDC comes to him and his colleagues for help, and this encounter results in a trip into CDC headquarters.

This book contains lots of foul language, and is not recommended for young readers. However, the action is great and the book is highly recommended for sci-fi and action fans. Along with this book, I recommend the whole series of *Feed*, *Blackout*, and the e-book *Countdown*.
