

STRICTLY EQUINE. THE HEALTHY DECISION.

MSM

Give 10g daily in feed - 1 heaping scoop is approximately 10 grams = 10000mg of MSM

Methyl Sulphonyl Methane, known as “MSM” is a naturally occurring sulphur compound that improves joint health, reducing inflammation and muscle and tendon soreness caused by training, injury, arthritis (degenerative joint disease) and epiphysitis.

MSM an excellent dietary source of sulfur that all cells require. MSM is not only essential for the production of cartilage which is comprised of strong collagen fibers embedded in a gelatinous matrix of glucosamine and chondroitin (proteoglycans), but also for production of keratin (hair, skin, hooves) as well as many enzymes and hormones that ensure proper digestion, central nervous and immune function.

MSM is also, a powerful antioxidant, helping to reduce oxidative cellular damage by enhancing the production of glutathione.

The anti-inflammatory and pain relieving benefits of MSM are profound. Arthritis is the gradual degradation of joint cartilage that occurs with age, normal wear and tear from everyday use and injury. Gradual stiffness and reduced joint mobility, swelling, are symptomatic which often leads to complete erosion of cartilage.
