

Golden Horseshoe Product Collection

Red Power

Red power is an iron rich supplement with essential vitamins and trace minerals for horses. Contains Iron, Vitamin B1, Vitamin B2, Vitamin B6, Vitamin B12, Folic Acid, Biotin, Vitamin A, Vitamin D, Vitamin E and more!
Feed 30 ml daily for maintenance dose.

Iron is an essential element for blood production. Red blood cells contain hemoglobin, an iron-rich, oxygen carrying protein that gives blood its red color. During competition or training, the working muscles and lungs require an enormous supply of oxygen and additional nutrients which are delivered by blood. Cardiac blood supply will increase by over 10 fold, from 25 liters per minute to over 300 liters per minute for elite athletes. Red Blood Cells are produced in bone marrow and have an average lifespan of 120 days and therefore, must be constantly regenerated to maintain good blood volume. Intense exercise, increases the demand for iron along with copper, B vitamins, including B12 and Folate, zinc, Vitamins A and E. Race horses are particularly sensitive to increased nutritional needs to furnish their high energy output, but also to replenish blood loss due to exercise-induced pulmonary hemorrhage (EIPH).

Red Power is an excellent source to build iron rich blood to increase delivery of oxygen and nutrient uptake to all body tissues and provide the additional nutritional requirements to enhance performance, for growth, tissue repair, normal cellular functioning, and synthesis of many hormones and connective tissue.
