

## Golden Horseshoe Product Collection

# Triple Flex Ability

Glucosamine, Chondroitin and MSM Supplement.

Degenerative joint disease is a natural progression of aging, or injury, affecting all horses and characterized by a reduction in the cartilage causing joint pain and inflammation. Triple Flex Ability with the combination of glucosamine, chondroitin, (building blocks of cartilage) and MSM, provides anti-inflammatory and antioxidant benefits, improving joint health, enhancing tissue repair, as well as reducing muscle and tendon soreness from age related arthritis, hard training, competition and injury. The addition of Methyl Sulphonyl Methane, is an excellent source of the sulphur, promoting healing and enhancing the production of glutathione (GSH), a powerful antioxidant composed of three amino acids- cysteine, glutamine and glycine which help neutralize oxidative damage and inflammation resulting from injury, hard training and lactic acid production

In a study with 24 thoroughbred race horses, glutathione levels were enhanced when horses were supplemented with MSM, therefore improving recovery times post race and improving performance.

Glucosamine hydrochloride 5.25g, Methyl sulfonyl methane 7g,  
Chondroitin sulphate 2.1g  
25g daily (1 scoop is approximately 25 grams)

**Available Size:**

**1.5 KG**

**4 KG**
