B-Comfortable Solution

A supplemental source of Vitamin B12, Boswellia, Yucca and Devil's Claw in a water based solution. Feed 30ml Daily

B Comfortable provides a natural and alternative way to manage inflammation and joint pain from everyday training, competition, injury, aging and arthritis.

The combination of Vitamin B12, Boswellia, Devils's Claw and Yucca is an effective nutraceutical to improve joint mobility, reducing inflammation, and cartilage degeneration.

Boswellia helps maintain joint health by reducing pain and inflammation, improving synovial fluid production, and maintaining integrity of connective tissue and cartilage.

Yucca contains saponins and a number of polyphenols that help prevent oxidative cellular damage, improving the immune response to decrease pain and inflammation. Yucca also has antimicrobial benefits.

Devil's claw has been used to treat osteo and rheumatoid arthritis in humans for thousands of years.

B12 not only helps reduce joint pain, but also improves blood volume by increasing production of red blood cells.

B comfortable is an easy to administer, cost effective way to improve joint mobility, not only for racing and competition horses, but aging and rapidly growing young horses and horses recovery from injury. B comfortable combined with Glucosamine Solution will be an excellent preventative measure to maintain good joint health and mobility.
